Transforming Asset Integrity to Drive Production and Sustainability in Indonesia's Energy Sector

A proven approach to boosting production, extending asset life, and enabling safer, smarter operations with R2S

Keeping assets running safely and efficiently is tough, especially when you're under pressure to boost production and cut costs. That's where R2S helps. It brings everything you need, drawings, photos, and engineering data, into one easy-to-use digital workspace, so your teams can plan confidently and get the job done right the first time.

See More. Plan Better. Operate Smarter.

R2S connects legacy drawings, photographs, and engineering data into a single, easy-to-use digital environment. By enabling multidisciplinary teams to collaborate onshore, it reduces time spent offshore, improves safety, and ensures critical work is completed without delays.

Plan with confidence:

Spot hazards early and build accurate work packs without leaving the office.

Keep people safe:

Fewer trips offshore mean less exposure and more time focused on what matters.

Work together, wherever you are:

Everyone, from engineering to maintenance, can plan, review and execute in one trusted workspace.

Protect uptime:

Better planning means fewer delays and predictable shutdowns.

Extend asset life:

Making informed, proactive maintenance decisions reduces integrity-related downtime and keeps your assets producing for longer.

Proven Results from Global Operators

Cut unplanned downtime by up to 25% with faster, more accurate planning.

Shorten turnarounds by 10–25%, delivering \$10 million in earlier production and saving 1,000+ offshore man-days.

Reduce site visits by up to 70%, lowering logistics costs and HSE exposure.

Speed up contractor familiarisation by 40% with improved work-pack accuracy.

Save up to 90% of the time spent locating and verifying critical asset information.

Driving National Priorities in Asset Integrity and Production

R2S supports Indonesia's digital transformation in oil and gas, helping operators and regulators achieve long-term energy and sustainability goals:

Boost production:
Minimise downtime and accelerate project delivery.

Improves operational efficiency:
Integrated, visual workflows reduce waste and rework.

Promotes asset sustainability:
Create a verifiable digital record of asset condition.

Builds local capability:
User-friendly technology enables rapid adoption and collaboration.

A Partner for Digital Transformation

R2S is trusted by leading operators globally to modernise integrity management, improve turnarounds, and deliver safer, more efficient operations. For Indonesia, it offers a scalable, proven pathway to achieving production targets and sustaining asset reliability for decades to come.
